

Flow Measurement

SITRANS FS (ultrasonic)

Clamp-on ultrasonic flowmeters

SITRANS FS230 ultrasonic flowmeter

Overview

SITRANS FST030 with FSS200 and external DSL

SITRANS FS clamp-on ultrasonic flowmeters provide highly accurate measurement while minimizing installation time and maintenance expense.

Benefits

- Easy installation; no need to cut pipe or stop flow
- Minimal maintenance; external sensors do not require periodic cleaning
- No moving parts to foul or wear
- No pressure drop or energy loss
- Wide turn-down ratio
- Single or dual path with internal DSL, up to four paths with external DSL option

System performance

Approvals	<ul style="list-style-type: none"> • ATEX Zone 2 (Sensors: Zone 0, 1, 2) • IIECEx Zone 2 (Sensors: Zone 0, 1, 2) • FM/FMc Class I Div. 2 (Sensors: Class I Div. 1)
Accuracy	± 0.5 ... 1 % for velocities above 0.3 m/s and >10 diameters straight run
Repeatability	± 0.25 % (based on ISO 11631)
Pipe size range	12.7 ... 10 m (0.5 ... 394")
Wall Thickness Range	0.64 ... 76.2 mm (0.025 ... 3.0")
Pipe material	Any sonically conductive material (steel, plastic, aluminum, glass, cement, ductile iron, copper)
Optional External DSL	Zone 0, 1, 2, Class 1 Div. 1 with transmitter in Zone 2 Class 1 Div 2 area

Optional External DSL

The optional external DSL allows for additional flexibility in application configurations. The External DSL benefits include:

- Measurement of 1-4 paths
- 2 x additional analog inputs, RTD or current
- Up to 150 m cable from DSL to transmitter (connection from zone 0,1 area to zone 2 area)

Applications

SITRANS FS230 standard functions are suitable for a wide variety of liquid applications, including the following:

- Water industry
 - Raw water
 - Potable water
 - Chemicals
- Wastewater industry
 - Raw sewage
 - Effluent
 - Sludges
 - Mixed liquor
 - Chemicals
- HVAC industry
 - Condensers
 - Hot and cold water systems
- Power industry
 - Nuclear
 - Fossil
 - Hydroelectric
- Processing industry
 - Process control
 - Batching
 - Rate indication
 - Volumetric and mass measurement

SITRANS FS230 hydrocarbon functions are ideal for applications carrying crude oil, refined petroleum or liquefied gas.

Standard volume (high end system)

- Standard (net) volume flow measurement
 - Suitable for use in leak detection systems
 - Mass flow output measurement
 - Chemical and petrochemical processing
 - Precise identification of interfaces on multi-liquid pipelines
 - Product identification
 - Standard density indication
 - Applications with multiple liquids having a wide viscosity range
 - Automatic gross volume compensation due to viscosity
- SITRANS FS230 is ideal for most natural and process gas industry applications, including:
- Checkmetering
 - Allocation
 - Flow survey verification
 - Lost and unaccounted for (LAUF) gas analysis
 - Production
 - Storage

The FS230 can be supplied with an external DSL option that allows for up to four paths with two additional analog inputs. The External DSL enclosure can be installed in a Zone 1 or Div 1 area near the sensors and measurement pipe using short sensor cables, with communication cable to transmitter up to 150 meters away.

Flow Measurement

SITRANS FS (ultrasonic)

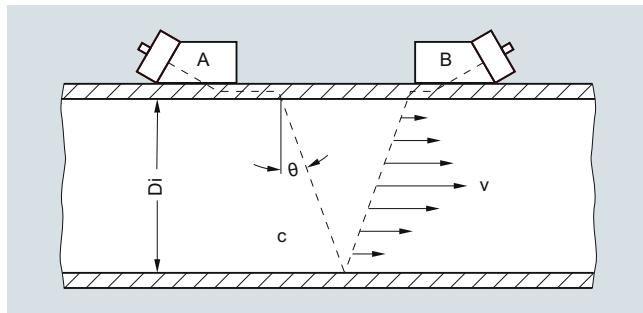

Clamp-on ultrasonic flowmeters

SITRANS FSS200 ultrasonic flow sensor

Function

Operating Principle

The SITRANS FS system is a transit-time ultrasonic meter that provides exceptional performance using a non-intrusive clamp-on approach. Ultrasonic sensors transmit and receive acoustic signals directly through the existing pipe wall, where the fluid refraction angle is governed by Snell's law of refraction.

Clamp-on sensor mounted in a reflect configuration

The beam refraction angle is calculated as follows:

$$\sin\theta = c / V_\phi$$

c = Velocity of sound in fluid

V_ϕ = Phase velocity (a constant in the pipe wall)

The flowmeter automatically compensates for any change in fluid sound velocity (or beam angle) in response to variations in the average transit time between sensors A and B. By subtracting the computed fixed times (within the sensors and pipe wall) from the measured average transit time, the meter can then infer the required transit time in the fluid (T_{Fluid}).

The sound waves traveling in the same direction as the flow ($T_{A,B}$) arrive earlier than sound waves traveling against the direction of flow ($T_{B,A}$). This time difference (Δt) is used to compute the line integrated flow velocity (v) as shown in the equation below:

$$v = V_\phi / 2 \cdot \Delta t / T_{\text{Fluid}}$$

Once the raw flow velocity is determined, the fluid Reynolds Number (Re) must be determined to properly correct for fully developed flow profile. This requires the entry of the fluid's kinematic viscosity (visc) as shown in the equations below, where Q represents the final flow profile compensated volumetric flow rate.

$$Re = Di \cdot v / visc \cdot Q = K(Re) \cdot (\pi / 4 \cdot Di^2) \cdot v$$

v = Flow velocity

$visc = \mu / \rho$ = (dynamic viscosity / density)

$K(Re)$ = Reynolds flow profile compensation

In wetted type ultrasonic flowmeters the meter constants are configured prior to leaving the factory. As this is not possible with clamp-on meters, the settings must be made by the customer at the time of installation. These settings include pipe diameter, wall thickness, liquid viscosity, etc.

SITRANS clamp-on flowmeters that include temperature sensing can be configured to dynamically infer changes in fluid viscosity for the purpose of computing the most accurate flow profile compensation (K_{Re}).

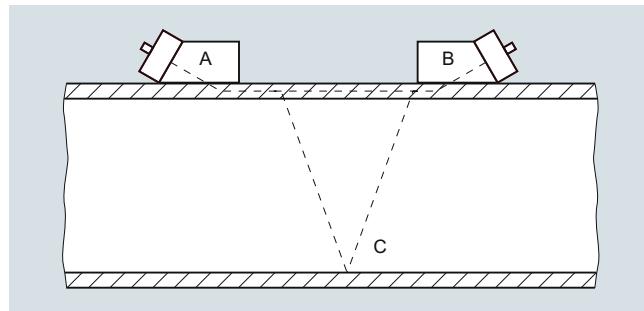

Ultrasonic sensor types

Two basic types of clamp-on sensors can be selected for use with the SITRANS FS flowmeter. The lower cost "universal" sensor is the most common type in the industry and is suitable for most single liquid applications where the sound velocity does not vary much. This sensor type can be used on any sonically conductive pipe material (including steel) making it well suited for portable survey applications. Universal sensors are selected

based on the pipe diameter range alone, so wall thickness is less important to the selection process.

The second sensor type is the "WideBeam" sensor (called high precision), which utilizes the pipe wall as a kind of waveguide to optimize the signal to noise ratio and provide a wider area of vibration. This makes this kind of sensor less sensitive to any change in the fluid medium.

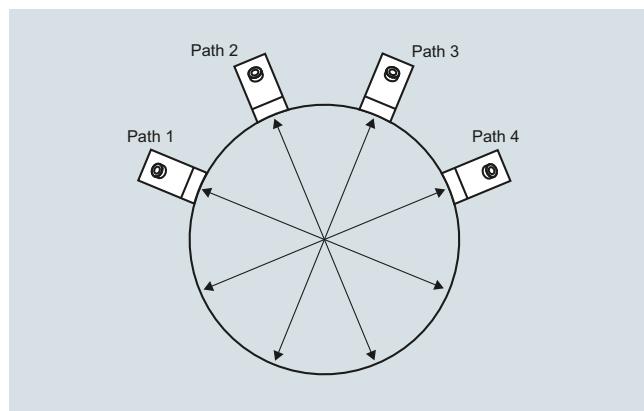

The WideBeam sensor is designed for steel pipes, but can also be used with aluminum and titanium. It is the preferred sensor for HPI applications. Note that unlike the universal type, this sensor selection is dependent only on the pipe's wall thickness.

Multi-path flowmeters

For improved flow profile averaging, redundancy or better cost per measurement, clamp-on meters can be supplied with 1, 2, 3 or 4 path measurement systems.

In the standard FS230 systems, these can be installed on a single pipe as shown below (four paths on same pipe).

Four path installation example

Function (continued)

SITRANS meter family description

SITRANS FS230 clamp-on flowmeters

The FS230 system is a basic function, permanent (or dedicated) Clamp-on meter that is available with a full range of safety approvals and I/Os. This meter can be used in a wide range of applications.

FST030 transmitter standard flow functions

When configured with standard flow functions, the FST030 transmitter is typically programmed with a fixed viscosity and specific gravity entry, which can limit the mass flow and volumetric flow accuracy when highly variable (multi-product) liquid properties flow through the same pipeline.

It will have the ability to accommodate clamp-on RTDs, or analog input from a temperature transmitter.

FST030 hydrocarbon flow functions

When configured with hydrocarbon functions, the FST030 can be used for applications that will flow a wide range of viscosity with a standard volume (mass) and interface detection functions available. All functions rely on a variable referred to as "Liquildent (TM)", which is used to infer the liquid's viscosity and density. This variable represents the measured liquid sonic velocity compensated by the operating temperature and pressure, so for a given liquid product the measured Liquildent (TM) output will remain constant over a wide range of pressure or temperature.

Standard volume description:

This Liquildent (TM) variable can also be used to identify the liquid flowing through the pipe as well as its physical properties (density, viscosity and compressibility) at base conditions. With this information the meter can be configured to output a temperature and pressure compensated (standard) volume flow rate using the API MPMS chapter 11.2.1 methods as shown below.

Correction for temperature:

Compute thermal expansion coefficient (α_b):

$$\alpha_b = K_0 / \rho_b^2 + K_1 / \rho_b$$

where: K_0 and K_1 are constants dependent on type of liquid and ρ_b is the liquid density at base conditions

Compute temperature correction factor (K_T):

$$K_T = \rho_b * \exp(-\alpha_b \Delta T (1 + 0.8 \alpha_b \Delta T))$$

where: $\Delta T = (T - \text{base temperature})$

Correction for pressure:

Compute compressibility factor (F):

$$F = \exp(A + B T + (C + D T) / \rho_b^2)$$

where: A, B, C and D are constants, and "T" is liquid temperature

Compute pressure correction factor (K_p):

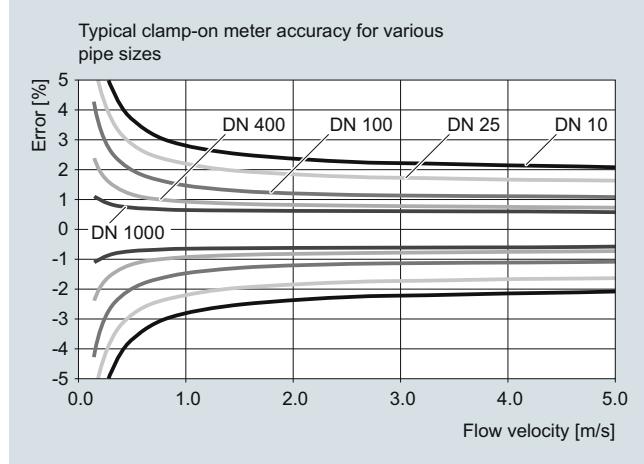

$$K_p = 1 / (1 - F (P_{act} - P_{base}) * 10^{-4})$$

Final volume correction: $Q_{std} = Q_{act} * K_t * K_p$

Available outputs from this meter include: API, standard density, mass flowrate, standard volume flowrate and liquid identification.

General installation guidelines for transit time clamp-on sensor

- Minimum measuring range: 0 to ± 0.3 m/s velocity (see meter accuracy graph below for more detail)
- Maximum measuring range: 0 to ± 12 m/s (± 30 m/s for high precision sensors). Final flow range determination requires application review

- Pipe must be completely full within the sensor installation volume for accurate flow measurement
- Typical MINIMUM straight pipe requirements are: 10 Diameters upstream/5 Diameters downstream. Additional straight run is required for double out-of-plane elbows and partially open valves.
- Sensors should be installed at least 20° off vertical for horizontal pipes. This reduces the chance of beam interference from gas buildup at the top of the pipe
- Operation inside the Reynolds transition region, between $1000 < Re < 5000$ should be avoided for best accuracy
- Submersible and direct burial installations can be accommodated. Consult sales representative for details
- Ultrasonic coupling compound is provided with all sensor orders. Insure that a permanent coupling compound is used for long term installations
- Refer to the "Sensor type selection guide" to insure proper application of the equipment

Definitions

Sensor chart	Description
FSS200	Formerly 1011 clamp-on sensors of the 1010 systems
Standard	Standard system sensor, selectable as part of a configured product
Special	Sensors available for non-standard applications and pipes. Contact tech support for application use
Corrosion resistant	Stainless steel metal parts on all Size C, D and E and all high temperature sensors
Aluminum	Aluminum metal parts on all HP and Universal size A and B (Corrosion resistant on request for size B)
Spare	Not available as part of a configured product, must be ordered separately
CE	Transmitter and sensors certified for sale in the EU
Trackless mount	Sensors fixed only by straps, no other mounting (spacer bar as an option) - not recommended
Tracks	Permanent installation for universal size A/B, high precision size A/B and all sizes of high temperature. Tracks always come as dual-part for either direct or reflect mounting, and always with straps.
Frames	Three sizes, for permanent installation for universal size C/ D/ E, and for high precision size C/D. For universal and high precision size B available for pipes > 125 OD (Spare)
T1	Usable from -40 ... +120 °C (-40 ... +248 °F), but best for Ø temperature below 80 °C (< 176 °F), standard
T2	Usable from -40 ... +120 °C (-40 ... +248 °F), but best for Ø temperature above 80 °C (> 176 °F)
Submersible	Sensors can be used submerged; adding Denso for supplemental protection is recommended

Overview

FST030 is based on the latest developments within Digital Signal Processing (DSP) technology – engineered for high measuring performance, fast response to step changes in flow, high immunity against process noise, easy to install commission and maintain.

The FST030 transmitter delivers true multi-parameter measurements i.e. volume flow, standard volume flow, density, mass flow, fluid sound velocity and temperature.

The multiple outputs and bus communication mean that all primary process information can be read either instantaneously (10 ms update) or periodically as required by plant operations.

Process values

- Volume flow
- Mass flow
- Flow velocity
- Sound velocity
- Standard volume flow (hydrocarbon variant only)
- Density
- Kinematic viscosity
- Pressure
- Medium temperature
- Specific gravity (hydrocarbon variant only)
- Totalizer 1
- Totalizer 2
- Totalizer 3
- Standard density (hydrocarbon variant only)
- Standard specific gravity (hydrocarbon variant only)
- Standardizing factor (hydrocarbon variant only)
- LiquIdent (hydrocarbon variant only)
- API gravity (hydrocarbon variant only)
- Standard API gravity (hydrocarbon variant only)
- Standard kinematic viscosity (hydrocarbon variant only)
- Liquid identifier (hydrocarbon variant only)

Benefits**Flow calculation and measurement**

- Dedicated volume flow calculation with DSP technology
- 100 Hz update rate for all output on all primary process values
- Maximum data age from sensor to output is 20 ms
- Independent low flow cut-off settings for volume and mass flow, standard volume flow and velocity
- Zero-point adjustment on command from discrete input or host system

Operation and display

- User-configurable operation display
 - Full graphical display 240 x 160 pixels with up to 6 programmable views
 - Self-explaining alarm handling/log in clear text
 - Help text for all parameters appears automatically in the configuration menu
- SensorFlash technology stores production specific system documentation and provides removable memory of all flowmeter setups and functions
 - Calibration certificates (with ordered calibration)
 - Non-volatile memory backup of operational data
 - Transfer of user configuration to other flowmeters
 - 4GB SD card for storage and data logging
 - Audit trail of all parameter changes
 - Alarm logging

Alarms and safety

- Advanced diagnosis and service menu enhances troubleshooting and meter validation
- Configurable upper and lower alarm and warning limits for all process values
- Alarm handling can be selected between Siemens and NAMUR standard configurations

Outputs and control

- Monitoring comprising of 3 individually configurable totalizers
- Multi-parameter outputs, configurable outputs assigned individually to any of the following parameters:
 - Volume flow
 - Standard volume flow
 - Mass flow
 - Flow velocity
 - Sound velocity
 - Density
 - Process viscosity
 - Process pressure
 - Process/medium temperature

Up to six I/O channels are configured as follows.

Channel 1

Channel 1 is 4 to 20 mA analog output with HART 7.5. The current signal can be configured for massflow, volumeflow and includes the availability of active or passive function selected by wiring on the non-Ex terminals. Alternative Modbus RTU RS 485 is available.

Channel 2

Channel 2 is a signal output which can be freely configured for any process variable.

- Analog current (0/4 to 20 mA)
- Frequency or pulse
- Operational and alarm status

Channels 3 and 4

Channels 3 and 4 can be ordered with signal (freely configured for any process variable) or relay outputs, or signal input.

Flow Measurement

SITRANS FS (ultrasonic)

Clamp-on ultrasonic flowmeters

SITRANS FST030 transmitter

Benefits (continued)

Signal output

Signal output can be user configured to:

- Analog current (0/4 to 20 mA)
- Frequency or pulse
- Redundant frequency or pulse (linked to channel 2)
- Operational and alarm status

Signal input

Signal input can be user-configured for:

- Totalizer reset functions
- Force outputs or freeze process values
- Initiate automatic zero point adjustment

Relay

Relay output(s) can be user configured to:

- Alarm status

4-20 mA signal outputs and inputs are ordered as active or passive for Ex versions, active and passive for non-Ex versions - function selected by wiring on the terminals.

During initial commissioning of the flowmeter, all outputs can be forced to a preset value for simulation, verification or calibration purposes.

Channels 5 and 6 (with internal DSL)

- RTD temperature inputs for 1000, 500 or 100 Ω RTD's - 2, 3 or 4 wire RTD's supported
- Channels 5 and 6 (with external DSL option)
- RTD Temperature inputs or 4-20 ma inputs. Selectable in menu.

Approvals and certificates

The SITRANS FST030 transmitter was designed to comply with or exceed the requirements of international standards and regulations.

Function

The following functions are available:

- Up to four configurable outputs and 2 RTD input channels selected at ordering
- Outputs can be individually configured for mass flow, volume flow etc.
- Three built-in totalizers which can count positive, negative or net flows
- Independent low flow cut-offs, adjustable
- Uni/bidirectional flow measurement
- Flow direction adjustable
- Alarm system consisting of alarm-log, alarm pending menu
- Change log, logs all changes made to menu parameters or via communications
- Internal data logger
- Display of operating time with real-time clock

Design

The SITRANS FST030 is designed in an IP67/Nema 4X aluminum enclosure with corrosion resistant coating. It can be wall or pipe mounted and the enclosure can be locked with a padlock or wired with lead security seals. Includes all flow and DSL functions integrated into one unit.

The FST030 is available as standard with one current, HART 7.5 output and can be ordered with additional input/output functions.

SITRANS FST030 wall mount housing transmitter has a modular design with discrete, replaceable electronic modules and connection boards to maintain separation between functions and facilitate field service. All modules are fully traceable and their provenance is included in the transmitter setup.

SensorFlash

SensorFlash is a standard, 4 GB micro SD card with the ability to be updated by PC. It is supplied with each transmitter and comes with a complete set of certification documents including report if ordered. Factory conformance certificates are optional at ordering.

The Siemens SensorFlash memory unit offers the following features and benefits:

- Copy site setups to SD card for easy transfer to other similar transmitters
- Permanent database of operational and functional information from the moment that the flowmeter is switched on
- New firmware updates can be downloaded from the Siemens internet portal for Product Support and placed onto Sensor-Flash (unmounted from the transmitter and inserted into a PC's SD card slot). The firmware is then inserted into the existing flowmeter for system/firmware upgrade.

SITRANS FST030 industrial housing

Separate field enclosure with modular design. The FST030 can be installed direct in the field. The SITRANS FST030 uses always the separate FS DSL for the sensor connection.

- Flowrate outputs are freely configurable between maximum negative and maximum positive flows according to the sensor capacity
- Limit switches programmable for flow, density and temperature. Limit points can be graded as warning and alarm for values both above and below nominal process conditions
- Zero adjustment menu, with zero point evaluation display
- Full service menu for effective and straight forward application and meter troubleshooting
- Precise temperature measurement ensures optimal accuracy on massflow and density
- Fully compatible with Siemens PDM version 8.2 service pack 1 or higher

Relay	<p>Type</p> <p>SPDT dry contact relay</p> <p>Load</p> <p>30 V AC/100 mA</p> <p>Functions</p> <p>Alarm level, alarm number, limit, flow direction</p>
Digital input	<p>Voltage</p> <p>15 ... 30 V DC (2 ... 15 mA)</p> <p>Current</p> <p>4 ... 20 mA</p> <p>Functionality</p> <p>Reset totalizer 1, 2 and 3, force output, freeze process values, zero point adjustment</p>
Galvanic isolation	All inputs and outputs are galvanically isolated, isolation voltage 500 V
Alarm and warning limit	Available for all process values
Totalizer	Three counters for forward, net and reverse flow
Display	<ul style="list-style-type: none"> Background illumination with alphanumeric text to indicate flow rate, totalized values, settings and faults Adjustable damping constant of 0 ... 100 s Reverse flow indicated by negative sign
SD card functions	<ul style="list-style-type: none"> Parameter change log Configurable data logger FW update log Diagnostic log Error and alarm log Parameter backup
Ambient temperature	
Operation	-40 ... +60 °C (-40 ... +140 °F), (humidity max. 95 %)
• Transmitter	-40 ... +60 °C (-4 ... +140 °F)
Display	
Storage	
• Transmitter	-40 ... +70 °C (-40 ... +158 °F) (humidity max. 95 %)
Communication	HART 7.5 Modbus RTU RS 485
Enclosure	
Material	Aluminum
Rating	IP66/67, Nema 4X to IEC 529 and DIN 40050 (1 mH ₂ O for 30 min.)
Mechanical load	18 ... 400 Hz random, 3.17 g RMS, in all directions
Power supply	
Universal	20 ... 27 V DC 100 ... 240 V AC, 47 ... 63 Hz
Fluctuation	No limit
Power consumption	20 W/22 VA
Minimum pressure for Gas	7 ... 10 bar (100 ... 145 psi), typical (gas composition and application dependent; plastic pipes support operation at atmospheric pressure)
Environment	
Environmental conditions acc. to IEC/EN/UL 61010-1	<ul style="list-style-type: none"> Altitude up to 2000 m Pollution degree 2 Oversupply category II
Maintenance	The flowmeter has a built-in error log/pending menu which should be inspected on a regular basis
Cable glands	Cable glands are available in nylon, nickel plated brass or stainless steel (316L/W1.4404)

FS230 dedicated sensor mounting hardware		Sensor mounting tracks (aluminum with mounting straps) for pipes < 125 mm (5 inch)
Sensor mounting frames for		Universal sensor size A or B High precision sensor size A or B
<ul style="list-style-type: none"> Universal sensor size B (for pipes > 125 mm (5 inch)) Universal sensor size C Universal sensor size D Universal sensor size E High precision sensor size B (For pipes > 125 mm (5 inch)) High precision sensor size C High precision sensor size D Magnetic mounting frames for size C, D, E, universal and high precision sensors 	CQO:1012FN-PB CQO:1012FNH-PB	0 M A 0 0 0 M B 0 0
Spacer bars (for indexing sensors on pipe)		Stainless mounting tracks for high temperature 991 sensors
Spacer bar for pipes to 200 mm/8 inch (liquid), 600 mm/24 inch (gas)	0 M S 1 0	Size 1 high temperature sensor pair Size 2 high temperature sensor pair
Spacer bar for pipes to 500 mm/20 inch (liquid), DN 1200/48 inch (gas)	0 M S 2 0	Size 3 high temperature sensor pair
Spacer bar for pipes to 800 mm/32 inch (liquid)	0 M S 3 0	Size 4 high temperature sensor pair
Spacer bar for pipes to 1200 mm/48 inch (liquid). Must be used with 7ME39600SM30	0 M S 4 0	
Mounting straps (slotted stainless steel)		Clamp-on RTD mounting hardware for dedicated systems
For pipes		RTD mounting hardware for dedicated system
DN 50 ... DN 150	0 S M 0 0	• 1152 ... 610 mm (6 ... 24")
DN 50 ... DN 300	0 S M 1 0	• 12.7 ... 50.8 mm (0.5 ... 2")
DN 300 ... DN 600	0 S M 2 0	• 31.8 ... 203.2 mm (1.25 ... 8")

Selection and ordering data for SITRANS FS230

Selection and ordering data	Article No.	Article No.	
Spare parts (Miscellaneous)		Spare parts (Miscellaneous)	
SITRANS FS Clamp-on	7ME3960- 	SITRANS FS Clamp-on	7ME3960- 
Cable glands and adapters		Pipe damping films	
Cable gland set M20, nylon	A5E38145321	B1, B2, B3, C1 and C2 sensors	0 D M 1 0
Cable gland set M20, nickel/brass	A5E38145323	D1 and D3 sensors	0 D M 2 0
Cable gland set M20, stainless steel	A5E38145327	D2 sensor	0 D M 3 0
Iris glands, set of 2, nickel plated brass	A5E38635890	D4 sensor	0 D M 4 0
Iris glands, set of 2, stainless steel	A5E38635986		
M20xNPT adapters, set of 8, brass/nickel	A5E38145635	Universal sensor test blocks	
M20xNPT adapters, set of 8, brass/nickel, Ex	A5E38309159	Test block for size A and B universal sensors	0 T B 1 0
M20xNPT adapters, set of 8, stainless steel	A5E38145643	Test block for size C and D universal sensors	0 T B 2 0
RTD temperature sensor cables		Thickness gauge	
6 m (20 ft) standard RTD cable	0 C R 5 0	Stand alone thickness gauge	7ME39510TG20
15 m (50 ft) standard RTD cable	0 C R 5 1		
30 m (100 ft) standard RTD cable	0 C R 5 2	Cable, DSL to wallbox transmitter	
46 m (150 ft) standard RTD cable	0 C R 5 3	Standard cable (non-Ex) with 2 x M12 connectors, PO insulation and PUR sleeve, gray, -40 ... +80 °C (-40 ... +176 °F)	A5E03914805
61 m (200 ft) standard RTD cable	0 C R 5 4	• 5 m (16.4 ft)	A5E03914850
91 m (300 ft) standard RTD cable	0 C R 5 5	• 10 m (32.8 ft)	A5E03914853
6 m (20 ft) submersible RTD cable	0 C R 5 6	• 25 m (82 ft)	A5E03914859
15 m (50 ft) submersible RTD cable	0 C R 5 7	• 50 m (164 ft)	A5E03914861
30 m (100 ft) submersible RTD cable	0 C R 5 8	• 75 m (246 ft)	A5E03914874
46 m (150 ft) submersible RTD cable	0 C R 5 9	• 150 m (492 ft)	
61 m (200 ft) submersible RTD cable	0 C R 6 0	Standard cable (non-Ex) for termination, PO insulation and PUR sleeve, gray, -40 ... +80 °C (-40 ... +176 °F)	A5E03914833
91 m (300 ft) submersible RTD cable	0 C R 6 1	• 5 m (16.4 ft)	A5E03914849
Dedicated cable termination kits for:		• 10 m (32.8 ft)	A5E03914854
Standard, plenum sensor cable (Nema 4X and Nema 7 wall)	0 C T 0 1	• 25 m (82 ft)	A5E03914856
Submersible sensor cable (Nema 4X and Nema 7 wall)	0 C T 1 1	• 50 m (164 ft)	A5E03914864
Clamp-on RTD cable termination kit for standard RTD	0 C T 2 1	• 75 m (246 ft)	A5E03914873
Clamp-on RTD cable termination kit for submersible RTD	0 C T 3 1	• 150 m (492 ft)	
Insert RTD cable termination kit	0 C T 4 1	Standard cable (Ex) with 2 x M12 connectors, PO insulation and PUR sleeve, blue, -40 ... +80 °C (-40 ... +176 °F)	A5E03914929
Termination kit for armored cable	CQO:1012CNFX-TK	• 5 m (16.4 ft)	A5E03914962
Ultrasonic couplants		• 10 m (32.8 ft)	A5E03914995
Temporary water based for portable systems: 350 ml (12 oz): -34 ... +38 °C (-30 ... +100 °F)	0 U C 1 0	• 25 m (82 ft)	A5E03915004
Permanent synthetic polymer based: 90 ml (3 oz): -40 ... +190 °C (-40 ... +375 °F)	0 U C 2 0	• 50 m (164 ft)	A5E03915074
Permanent high temperature fluoroether: 163 ml (5.5 oz): -40 ... +230 °C (-40 ... +450 °F)	0 U C 3 2	• 75 m (246 ft)	A5E03915088
Dry coupling pad kit (10 pieces)	0 U C 4 0	• 150 m (492 ft)	
Permanent vulcanizing silicone rubber couplant: 90 ml (3 oz): -40...+120C (-40...+250 °F)	CQO:CC112	Standard cable (Ex) for termination, PO insulation and PUR sleeve, blue, -40 ... +80 °C (-40 ... +176 °F)	A5E03914945
Permanent high temperature silicone grease: 12 ml (0.4 oz): -40 ... +230 °C (-40 ... +450 °F)	CQO:CC117B	• 5 m (16.4 ft)	A5E03914973
Permanent high temperature silicone grease: 150 ml (5 oz): -40 ... +230 °C (-40 ... +450 °F)	CQO:CC117A	• 10 m (32.8 ft)	A5E03914984
Couplant for submersible sensor applications	CQO:CC120	• 25 m (82 ft)	A5E03915015
		• 50 m (164 ft)	A5E03915057
		• 75 m (246 ft)	A5E03915100
		• 150 m (492 ft)
